

Advancing Toward Full On-Chain Independence

PBG now runs its own dedicated node on the Cardano blockchain — a key step in reducing third-party reliance and strengthening the protocol's technical autonomy.

This node, named **Ra**, is inspired by the powerful “Eye of Ra” from Egyptian mythology — a symbol of vision, action, and autonomous force. Like the mythological eye, Ra acts as our real-time connection to the network: confirming transactions, reading states, and processing queries with speed and precision.

A node is a server that connects directly to the blockchain, allowing decentralized systems to operate without relying on external providers. By running Ra, all activity within the PBG ecosystem is executed with greater consistency, lower latency, and complete independence — reinforcing our commitment to full transparency and performance at every layer.

Early Access Still Open

Be Among the First 100,000 to Mint PBG Token

PBG Token minting is now live — and the first 100,000 tokens are still available for early participants shaping the future of decentralized asset management.

By minting and holding PBG, you unlock exclusive benefits:

- Participation in protocol governance and evolution
- Priority access to upcoming ecosystem products
- Support a fully on-chain infrastructure for tokenized real-world assets
- Eligibility for early adopter raffles: trips, experiences & more

While PBG is not a traditional investment, holding the token provides exposure to an evolving on-chain portfolio — and like many digital assets, its value in secondary markets may reflect future demand and ecosystem relevance.

This isn't just about holding a token, it's about taking part in a decentralized infrastructure designed to reshape asset management.

The Latest in Crypto & DeFi

Coinbase Pushes to Tokenize Equities

Coinbase is seeking approval from the U.S. SEC to offer tokenized stocks to retail users. This move marks a significant milestone in the push to bring traditional financial products onto blockchain infrastructure, a vision PBG has embraced from day one. The demand for fully on-chain, transparent, and secure tokenization protocols continues to rise.

\$5.7B in Tokenized Funds — and Growing

According to Moody's, tokenized investment funds have grown from \$3.1B in January to \$5.7B by June, an 84% increase. BlackRock and Franklin Templeton are leading this charge, showing how traditional finance is rapidly shifting on-chain.

This trend validates the need for decentralized, non-custodial solutions like PBG's DVPs.

Europe Embraces Tokenized Transactions

Nearly 50% of all online Mastercard transactions in Europe are now tokenized, signaling massive mainstream adoption. Meanwhile, institutions like Franklin Templeton and Fidelity are helping shape tokenization policy at SEC roundtables.

The world is standardizing on-chain, and those without decentralized infrastructure will fall behind.

Smart Contracts, Simplified

How PBG Token Works — New Explainer Video

We've just released a new educational video to help you understand the mechanics behind PBG's protocol.

Learn how smart contracts automate every step — from minting to burning — and how transparency, control, and efficiency define the ETF 2.0 experience.

Did You Know?

A 300-Year-Old Stradivarius Violin Was Just Tokenized

Galaxy Digital has tokenized the 1708 “**Empress Caterina**” **Stradivarius**, once owned by Russian royalty and valued at \$9 million. It's the first time a centuries-old luxury collectible has been fully represented on-chain.

The instrument's provenance, ownership, and collateralization are now secured through blockchain, demonstrating how tokenization can unlock the economic value of unique, real-world assets.

This isn't just innovation in finance. It's history going digital.
