

The Core Mint Phase Is Now Live — Until September 2025

PBG's initial minting window is officially open, offering a **limited 100,000-token allocation** for those looking to secure a position in the only non-custodial, institutional-grade protocol on Cardano. This is a **time-sensitive entry point**, designed for funds, advanced DeFi participants, and qualified capital to gain access to an actively managed, risk-adjusted portfolio — while also unlocking long-term value through revenue participation in the licensing of our proprietary DVP architecture.

The window closes in September 2025. After that, access moves entirely to the secondary market.

Why Cardano's UTxO Model Matters for PBG

PBG's protocol isn't just another DeFi product. It's built on top of Cardano's **Extended UTxO (eUTxO) model**, a fundamentally different architecture compared to the account-based systems of other blockchains.

The **eUTxO model** enables:

- **Deterministic smart contracts** with predictable execution
- **Parallel transaction processing** without network congestion
- **Higher security guarantees** and fewer attack vectors

This architecture is **irreplicable outside Cardano**, and it's what makes PBG's **14-validator DVP protocol** possible. Coupled with our **AI-driven portfolio models**, macroeconomic insights, and over 20 years of inter-market expertise, PBG operates as a **precision-engineered layer for institutional-grade asset management**.

In short, Cardano's unique infrastructure isn't just compatible with our vision — it's essential to it.

The Latest in Crypto & DeFi

RWA Tokens Add \$14B in a Week — and Counting

The market cap of RWA tokens surged from \$49B to \$63B in just seven days, highlighting an accelerating institutional shift to on-chain assets.

This validates PBG's long-term vision: a non-custodial, institutional-grade infrastructure built to tokenize and manage real-world assets with transparency and control.

Bitcoin's History Remains 99.8% Profitable

99.8% of Bitcoin's trading history has been profitable — an undeniable signal of its resilience as a macro asset.

Soon, BTC exposure will go live within PBG's architecture, offering institutional participants a fully on-chain, actively managed entry point.

Cardano Tokens Show Strong Weekly Momentum

\$Snek is up 73% and \$WMTX has gained 20% this week, reflecting renewed strength across the Cardano ecosystem.

The DVP currently holds:

- 124,959,936 \$SNEK
- 1,000,002.43 \$WMTX

This highlights how PBG's actively managed portfolio captures on-chain opportunities while maintaining a non-custodial structure built for institutional-grade exposure.

Everything Will Be Tokenized Why PBG Was Built for This Shift — New Explainer Video

We're entering a new phase of finance where every asset — from equities to luxury collectibles — will live on-chain.

This short video explains how PBG's DVP protocol was designed from the ground up to support real-world asset tokenization in a non-custodial, institutional-grade architecture, bridging TradFi and DeFi.

Learn why PBG is the only protocol on Cardano capable of scaling this vision.

Did You Know?

NFL Star Odell Beckham Jr. Took His Salary in Bitcoin

When OBJ accepted part of his salary in **\$BTC**, it wasn't just bold — it was visionary. Today, with Bitcoin reaching new highs, that decision highlights how **macro-resilient assets** like BTC are becoming a core part of both individual and institutional strategies. And soon, BTC will be integrated directly into PBG's architecture — managed on-chain, risk-adjusted, and accessible through our DVP protocol.
