

AMA (Ask Me Anything) with the CEO: September 25, 16:00 UTC

This will be our first open session with the community. A space to see and understand how PBG is building onchain portfolio management with diversified access, built to an institutional standard. We want to show, listen, and celebrate with the people who are moving the space forward.

What makes this AMA special

- It's our first one. We're opening the door to speak directly with the team and share the vision guiding what we are building.
- Main presentation. Pablo Antonio Bejarano will introduce the story, purpose, and current state of the project, focusing on what our infrastructure enables.
- Prizes and recognition. There will be live raffles for attendees. We will publish terms and conditions before the event.
- Real participation. Live Q&A and space for feedback that helps us prioritize next steps.

What makes PBG Token different

PBG Token:

- 100% onchain: real-time auditing, no monthly reporting or third-party custody.
- Fractional access: lowers entry barriers by enabling partial ownership of the fund.
- Global 24/7 liquidity: no redemption windows or time restrictions.
- Lower operating costs: fewer intermediaries, with clear and efficient fees.
- Institutional-grade management: quantitative strategies powered by PBG's proprietary AI models and macro analysis.

Other tokenized alternatives

- Often offchain with traditional custody and delayed reporting.
- Limited liquidity; usually not designed as a means of payment.
- Transparency dependent on oracles; not verifiable in real time.
- Access requires high thresholds or complex processes.
- No integrated management; single-purpose tokens.

Plus, **PBG Token provides diversified exposure to high-potential digital assets:** \$ADA, \$SNEK, \$WMTX, \$BTC, \$PUSDC, and \$PAXG.

The Latest in Crypto & DeFi

Binance and Franklin Templeton partner to tokenize traditional assets

An exchange teams up with a global asset manager to bring traditional assets onchain and leverage global trading reach. The move aims for more efficient, transparent crypto-linked investments, validating programmable onchain architectures like PBG's DVP.

Ant Digital to tokenize \$8.4B in energy assets on AntChain

The digital arm of a major Asian group plans to tokenize solar and wind projects worth 8.4B USD on its blockchain infrastructure. It is one of the largest RWA steps to date and accelerates adoption of onchain instruments backed by real assets, aligned with PBG's preparation to integrate RWAs within the DVP.

Nasdaq files with the SEC to tokenize stocks with full shareholder rights

The filing would allow investors to trade shares either through traditional venues or onchain while preserving full economic and voting rights. It marks a key step toward capital markets built on onchain rails and reinforces the case for institutional-standard infrastructure like PBG's.

pASSETS = alpha

Tokenized inside the DVP: Gold, Bitcoin, and USDC

p-Assets are bridge assets that PBG brings from any blockchain - think Bitcoin, USDC, or tokenized securities - to inject deep liquidity and eliminate slippage.

They are the foundation of our [Decentralized Vault Portfolios \(DVPs\)](#), all powered by our proprietary infrastructure, designed for seamless interoperability and flawless execution.

Simple: more relevant assets, with institutional-grade liquidity and zero friction in execution for better performance.

RWAs coming soon.

Did you know?

By registering and participating, you can access \$PBG rewards as a thank-you to the community.

- **First 10 to join live:** 0.25 \$PBG each.
- **Mint-to-Enter:** mint \$PBG before the AMA to enter a draw for 3 \$PBG.
- **Early birds:** the first 30 registrations receive a referral code with benefits from referred mints, capped at 25 \$PBG.
